Dear Rubrik Hiring Team,

I hope this letter finds you amidst the whirlwind of innovation that is Rubrik. If not, then I trust it will serve as a delightful interruption to your day.

Let's get right to it—I want to intern at Rubrik, and here's why.

While some people collect stamps, I collect data. Okay, not literally, but you get the idea. Data, much like Rubrik, is at the heart of everything I do. As a budding computer scientist with a penchant for all things tech, this place is a perfect fit for me.

What sets me apart? I bring an insatiable curiosity, a knack for solving puzzles, and a knackier sense of humor. I believe that innovation thrives in environments where people dare to be different and aren't afraid to ask, "What if?"

Rubrik's mission to simplify data management and accelerate cloud adoption resonates with my aspirations. Your team's relentless pursuit of excellence is both inspiring and, dare I say, infectious. I want to catch that Rubrik fever and help steer the ship towards even greater horizons.

In my academic voyage, I've dabbled in database design, cloud computing, and software development. My internship at International Institute of Information Technology allowed me to transform raw data into meaningful insights, a bit like turning abstract ideas into reality.

But enough about me; let's talk about us. I believe that my passion for problem-solving and penchant for puns align seamlessly with the Rubrik ethos. I look forward to contributing to your data-driven dance and grooving to the rhythm of innovation.

I'm excited about the prospect of joining the Rubrik team for a summer of learning, laughter, and, of course, some serious tech wizardry. My resume is attached for your perusal, but I promise it's more fun in person.

Thank you for considering my application. I'm eagerly awaiting the opportunity to chat more about how I can bring my unique blend of skills and humor to Rubrik. Please feel free to reach out to me at write2nandann@gmail.com.

Let's make this summer unforgettable, one data point at a time.

Sincerely,

Nandan N
